Burns

NOTE: When calculating Total Body Surface Area (TBSA) do not include superficial burns (erythematous tissue) in the TBSA

BURN SEVERITY DETERMINATION/DEFINITIONS SUPERFICIAL - NOT counted in TBSA Dry, red, easily blanching, sometimes painful (i.e., sunburn) SUPERFICIAL PARTIAL THICKNESS – counted in TBSA Moist, red, blanching, blisters, very painful DEEP PARTIAL THICKNESS – counted in TBSA Drier, more pale, less blanching, less pain FULL THICKNESS – counted in TBSA Dry, leathery texture, variable color (white, brown, black), loss of pin prick sensation

GENERAL TREATMENT:

- 1. Follow General Pre-Hospital Care-Treatment Protocol.
- Pediatric patients (< 14 years of age) utilize MI MEDIC cards for appropriate medication dosage. When unavailable utilize pediatric dosing listed within protocol
- 3. If evidence of possible airway burn, consider proactive airway management per **Airway Management-Procedure Protocol.**
- 4. Administer 100% oxygen to all patients rescued from a confined space fire (i.e., building, automobile) regardless of pulse oximetry reading.
- 5. Determine burn extent & severity (rule of nines, or palm = 1%).
- 6. Keep patient warm and avoid hypothermia.
- 7. Assess and treat for associated injuries.
- 8. If burns are associated with unconsciousness or respiratory burns, or cyanide poisoning, refer to **Cyanide Exposure-Special Operations Protocol.**

THERMAL BURNS:

- 1. Stop the burning process. Remove smoldering and non-adherent clothing.
- 2. Consider potential for secondary contamination .
- 3. Assess and treat associated trauma.
- 4. Remove any constricting items.
- 5. Cover burns with dry clean dressings to prevent hypothermia.

CHEMICAL BURNS:

- 1. Protect personnel from contamination.
 - a. Identify chemical agent when possible.
- 2. Remove all clothing and constricting items.
- 3. Decontaminate patient prior to transport, brushing off dry chemicals prior to irrigation refer to **Hazard Contaminate Patient-Special Operations**.
- 4. Evaluate for systemic symptoms, which might be caused by chemical contamination.
- 5. Notify receiving hospital of possible chemical contamination.
- 6. Cover burned area in clean, dry dressing for transport.

ELECTRICAL INJURY:

1. Protect rescuers from live electric wires.

Initial Date: 9/22/2015 Revised Date: 05/22/2023

Michigan TRAUMA AND ENVIRONMENTAL BURNS

- 2. When energy source is removed, remove patient from electrical source.
- 3. Treat associated injuries, provide spinal precautions per **Spinal Injury Assessment-Treatment Protocol** when indicated.
- 4. Assess and treat contact wound(s).
- 5. Monitor patient ECG for possible arrhythmias. Treat as per specific arrhythmia protocol.
- FOR ALL TYPES OF BURNS:
- S 1. Obtain vascular access if indicated for pain management or fluid therapy per Vascular Access and IV Fluid Therapy-Procedure Protocol.
- S 2. For patients with hypotension administer LR (NS if LR not available) IV/IO fluid bolus
 a. Adults: up to 1 liter
 - b. Pediatrics: up to 20 ml/kg
- 3. If patient remains hypotensive consider other underlying causes for hypotension and contact Medical Control prior to further fluid resuscitation.
- S 4. For non-superficial burns without hypotension and BSA > 10% deep partial thickness (second degree) or any full thickness (third degree) administer fluids according to age
 - 🔊 🐛 a. <1 year Ćontacť Medical Control
 - 👢 b. 1-5 years old: 125 mL/hour
 - 👢 c. 6-13 years old: 250 mL/hour
 - d. <u>></u>14 years: 500 mL/hour
- 5. Administer analgesic medication. Refer to **Pain Management-Procedure Protocol**.
 - 1. Follow local MCA Transport Protocol.
 - 2. Special Transport Considerations
 - a. If severe airway/breathing compromise that cannot be managed transport to the closest facility.
 - b. Burn patients that also meet the field trauma triage criteria (refer to **Adult/Pediatric Trauma Triage-Treatment Protocol**) should be transported to the closest appropriate trauma facility per MCA Transport Protocol.
 - c. Consider transport directly to burn center if:
 - i. Full thickness burns
 - ii. Partial thickness ≥10% TBSA
 - iii. Any deep partial or full thickness burns involving the face, hands, genitalia, feet, perineum, or over any joints
 - iv. All patients with suspected inhalation injury
 - v. Circumferential burns
 - vi. All chemical injuries
 - vii. All high voltage (≥1,000V) electrical injuries
 - viii. Lightning injury
 - d. Consider air ambulance transportation for long transport times, pain control requiring deep sedation, and airway concerns that might necessitate advanced airway management.
