

### *Michigan* ADULT CARDIAC

#### PULMONARY EDEMA/CARDIOGENIC SHOCK

Initial Date: 11/15/2012

Revised Date: 06/03/2023

Section 5-4

# Pulmonary Edema/Cardiogenic Shock

This protocol is to be followed for patients in respiratory distress due to pulmonary edema with or without hypotension (i.e., CHF/fluid overload or Cardiogenic Shock). Pulmonary edema usually presents with crackles which should be continuously evaluated as they may evolve with treatments.

- 1. Follow General Pre-Hospital Care-Treatment Protocol.
- 2. Initiate supplemental oxygen by non-rebreather mask.
- 3. Position patient upright with legs dependent, if possible.
- 4. Consider CPAP per CPAP-Procedure Protocol
- 5. Establish IV access without delaying treatment per Vascular Access & IV Fluid Therapy-Procedure Protocol.
- S 6. If wheezing, administer albuterol 2.5 mg/3ml NS nebulized (Per MCA selection may be EMT skill) per Medication Administration-Medication Protocol

Nebulized **albuterol** administration per MCA selection

EMT

- § 7. If crackles (with or without wheezing) administer **nitroglycerin** as outlined below.
  - a. Inquire of all patients regardless of identified gender if they have taken an erectile dysfunction medication or medications used to treat pulmonary hypertension in the last 48 hours.
    - i. If yes, DO NOT ADMINISTER NITROGLYCERIN AND CONTACT MEDICAL CONTROL.
  - b. Prior to IV administration if no erectile dysfunction medication and systolic BP is above 120 mmHG, **nitroglycerin** 0.4mg sublingual may be administered up to a maximum of 3 doses.
  - c. If SBP above 100 mmHg (with IV/IO in place), administer **nitroglycerin** 0.4 mg SL, repeat every 3-5 minutes if SBP remains above 100 mmHg.
- d. If wheezing continues, continue **nitroglycerin** 0.4 mg SL and consider: **albuterol/ipratropium bromide** per **Respiratory Distress-Treatment Protocol** 8. If SBP is below 100 mmHG treat for cardiogenic shock.
  - a. Prepare (epinephrine 10 mcg/mL) by combining 1mL of 1mg/10mL epinephrine in 9mL NS
    - i. Administer 20 mcg (2 mL epinephrine 10 mcg/mL) IV/IO
    - ii. Repeat every 3-5 minutes
    - iii. Titrate SBP greater than 90 mm/Hg.
  - 9. If indicated, consider an advanced airway see **Airway Management-Procedure Protocol**.
- 10. Obtain 12-lead ECG (May be a BLS or Specialist skill, per MCA selection, see 12 Lead ECG-Procedure Protocol). Follow MCA transport protocol if ECG is positive for ST segment elevation myocardial infarction (STEMI) and alert hospital as soon as possible.
